

State of California  
DEPARTMENT OF FISH AND GAME  
Natural Diversity Data Base

## **License Agreement**

You are subject to the following terms and conditions with regard to the purchase and/or use of data from the Natural Diversity Data Base (NDDB):

1. You are free to make copies of NDDB data or database applications in digital or hardcopy form for use or distribution within your department, agency, business or corporation. Subcontractors may have access to these data during the course of any given project but should not be given a copy for their use on subsequent, unrelated work. We are a cost recovery operation. Your distribution of unauthorized copies of our data to individuals or corporate entities outside of your own group compromises our fiscal resources, and consequently, our abilities to collect and distribute these data to you. This copy privilege does not extend to professional organizations, associations or affiliations. In these cases, we will negotiate a special rate for organization members. Should you be approached by individuals outside your organization for the type of data that we provide, please refer them to the NDDB.
2. As a professional courtesy, we ask that you acknowledge the NDDB as a source of your information whenever you use NDDB data in your reports, papers, publications or in maps that incorporate NDDB graphic elements.
3. You must recognize that the NDDB is dynamic. We add, delete and change records on a daily basis. Consequently, we strongly advise that you plan to update your NDDB data sets about every six months for most applications of our information. It is your responsibility to use a current copy of NDDB data for your analysis or other work.
4. NDDB data require a certain degree of biological expertise for proper analysis, interpretation and application. Our staff is available to you by phone to advise you in the technical aspects of our data. We can also arrange NDDB training and orientation for you. It is your responsibility to insure that the data you obtain from us are not misapplied.
5. We work very hard to keep the NDDB as current and up to date as possible given our capabilities and resources. However, we cannot and do not portray the NDDB as an exhaustive and comprehensive inventory of rare species and natural communities. Field verification for the absence and presence of sensitive species will always be an important obligation of our customers. Likewise, your contribution of data to the NDDB is equally important to the maintenance of the NDDB.
